

WINDMILL BLOCK

### Materials needed

Jelly Roll or other scrap fabric strips 2 1/4 inches wide

6 1/2 square ruler Olfa QR-6S or similar

Rotary Cutter

Thread and bobbin for machine piecing

Pins

### METHOD

1. Sew two fabric strips together with a 1/4 inch seam.
2. Cut the double strip into 4 inch lengths (should get 8 from each full width of fabric, enough for two windmill blocks).
3. Sew two pieces together to make a T pattern. Repeat 3 times.
4. Sew two of the T pieces together to make the windmill. Repeat once. You will now have made two windmill centres.
5. Take a new 2 1/4 inch strip of fabric and sew around the outside of the windmill. (ALL four sides). Finger press seams as you sew. Trim strip and avoid selvage holes/creases in the fabric so the block is good.
6. Repeat step 5 for the second windmill
7. The block size is about 10 1/2 inches including seam allowance and will make a finished size block of about 9 1/2 inches.
8. Make up two windmills as demonstrated. Iron the block. Please leave without trimming to a specific size. When all the blocks are together and the layout chosen they will be trimmed as required.
